

About Alliance Inspection Management

Alliance Inspection Management, AIM, was conceived with a vision of enhancing the current state of the new and used vehicle inspection industry. Our mission is to create a new national, independent, third party inspection company with a focus on efficiency and customer service.

AIM stands as a viable option to regional inspection companies, contract (non-employee) inspectors and auction-based inspection companies.

Our business is to inspect vehicles, new and used. Our mission is to provide consistent, quality service to our customers and partners.

What AIM Provides

AIM offers a comprehensive range of new and used vehicle inspection services. In addition, we pledge to provide truly satisfying and respectful service. Here's the AIM promise:

- True independent, third party company with no conflicts of interest
- Advanced IT solutions
- National footprint with highly trained, company employed field inspectors
- New car and used car inspection synergy
- Strong, independent financial position
- Proven management that is driven to improve and lead the inspection industry
- Competitive pricing, superior customer care

Standard in New and Used
Vehicle Inspections*

A Leader Today in New Car Inspections

AutoComm, one of the most respected independent new vehicle inspection companies in the United States and Canada, provides AIM with the foundation, solid technology platform, national footprint and experienced management team to solidify AIM's position as the leader in the new car inspection industry.

An Emerging Presence in Used Vehicle Inspections

The synergy of the AIM and AutoComm union allows the new organization to quickly enter the used vehicle inspection space. By adding sophisticated management technologies to existing platforms, AIM will be able to immediately provide the consistency, quality and dependable customer service that portfolio holders have been looking for in a service provider.

A Focus on Customer Service

AIM understands our customers' business. By bringing both hands-on field inspection experience and an OEM/financial perspective, AIM management understands the needs of both buyers and sellers – with the independence to bridge the sometimes conflicting needs of both groups.

AIM's Web-based logistic and scheduling systems, which utilize real time systems, handheld wireless computers and other state-of-the-art Information Technologies infrastructure, enable previously unobtainable levels of customer service and support, as well as enhanced operational efficiencies.
